

## **Neuroscience of Addiction and Fear (PSYC-4820/3, Section 002)**

### **Instructors**

Harinder Aujla  
Phone: 258-2939  
Office Hours: Wednesday, 10:30-11:20

Office: 4L05A  
E-Mail: [h.aujla@uwinnipeg.ca](mailto:h.aujla@uwinnipeg.ca)

Doug Williams  
Phone: 786-9334  
Office Hours: Monday, 9:30 – 10:20

Office: 4L44B  
E-Mail: [d.williams@uwinnipeg.ca](mailto:d.williams@uwinnipeg.ca)

Drop-in visits are always welcome. You can count on finding us in our offices at the times listed above.

### **Course Content**

The first part of the course the class will consider the neural circuitry of fear conditioning in animals, and explore fear learning in a model system, Fraidy Rat, which has been implemented in a computer program.

The second part of the course will examine theories of addictions with a focus on underlying stress and reward circuitry. We will also examine the similarity of addiction-related processes to other psychological phenomena.

### **Fear Section (Sept 7 – Oct 26)**

Lectures will introduce you to the circuitry underlying fear acquisition and then explore mechanisms of fear extinction. Emphasis will be placed on what is known about their neural underpinnings. A quiz will assess your knowledge of this lecture material and the LeDoux readings. (**Fear Quiz, 25 points, September 23**).

FraidyRat is a computer simulation of a plausible neural structure to account for a number of salient aspects of fear conditioning and extinction in rats. For example, the Fraidy program assumes the hippocampus is critical for establishment of a neural representation of the conditioning context by binding together individual features of the environment. Over time the conditioning context representation is assumed to become independent of the continued existence of the hippocampus as it becomes consolidated in other parts of Fraidy's brain. It may then serve as a cue to signal danger.

On Sept 28 you will be introduced to the Fraidy rat program. The main anatomical regions of his brain will be investigated by recording neural firing rates and by activating or inactivating brain regions via stimulation or drug infusion. You will be working through series of guided exercises and will answer a set of laboratory questions. (**25 points, due Nov 9**)

As a part of the preceding exercise, each student will use the Fraidy program to determine if it can account for a finding in the literature. The student will choose a

scientific paper from a list provided by the instructor and then attempt to simulate those results with Fraidy.

### Fear Required Books

LeDoux, J. (2016). *Anxious: Using the Brain to Understand and Treat Fear and Anxiety*, New York, NY: Penguin Random House. ISBN 9780143109044 (This popular book is widely available for \$25 at bookstores)

Krasne, Franklin B. (2014) *Fraidy Rat Companion*. Creative Commons. (Supplied by Instructor)

### Weekly Schedule

Week of Sept 7	LeDoux Chapter 1, 2	LeDoux Chapter 3, 4
Week of Sept 14	LeDoux Chapter 5, 7	LeDoux Chapter 8, 9
Week of Sept 21	LeDoux Chapter 10, 11	<b>FEAR QUIZ</b>
Week of Sept 28	Fraidy Companion, Chapters 1, 2	<a href="#">National Reconciliation Day, No Classes</a>
Week of Oct 5	Fraidy Companion, Chapters 3	Fraidy Companion, Chapter 4
Week of Oct 19	Fraidy Companion, Chapter 5	<b>Presentations Persons 1-9</b>
Week of Oct 26	<b>Presentations Persons 9-18</b>	Addiction Section Begins

### Addiction Section (Oct 26 to Dec 9)

The course begins with an overview of neuroplasticity and an examination of two major theories of drug addiction – incentive sensitization and hedonic dysregulation and adaptation. The following weeks cover recent developments in addiction and relate what is known to other psychological phenomena.

This section of the course culminates with a quiz (**Addiction Theories, 20 points**) and a paper (**20 points; due Dec 23**) following a corresponding 15 min seminar presentation the same topic approved by the instructor (**10 points, due Week of Nov 30**).

### Readings

#### Neuroplasticity:

**Weekly Schedule**

Week of October 26	Fear Section Ends	Neuroplasticity; Lecture
Week of November 2	Neuroplasticity; Lecture	Allostasis/Hedonic Dysregulation; Lecture
Week of November 9	Incentive Sensitization; Lecture	Reembrance Day, No Classes
Week of November 16	Executive Function; Lecture	Theory comparison; Lecture and Discussion
Week of November 23	Behavioural Addictions; Lecture	Psychedelics; Lecture
Week of November 30	<b>Addiction Theories Quiz</b>	<b>Presentations Persons 1-6</b>
Week of December 7	<b>Presentations Persons 7-12</b>	<b>Presentations Persons 13-18</b>

Please note the schedule is tentative; all topics may not be covered (any omitted material will be indicated during class). Extraneous material will not be permitted for use during quizzes.

## **Final Grades**

Letter grades based on the tally of all course components will be distributed as closely as possible to the following scale:

### **Grade Distribution**

Letter Grade	Minimum %
A+	95
A	85
A-	80
B+	75
B	70
C+	65
C	60
D	50
F	0

All grades and grade cutoffs are tentative and may be changed in either direction by (i) the professor, (ii) the Departmental Review Committee, or (iii) the Senate, when circumstances warrant.

Components of the course are Addiction Theories Quiz (20 points), Paper (20 points), and seminar (10 points), Fear System Quiz (25 points), and Fraidy Lab Report (25 points). Grades are reviewed by the Psychology Department Review Committee be increased or decreased, although changes are extremely unlikely. The final date for withdrawing from this course without academic penalty is **November 16, 2021**.

### **General Information**

Please acquaint yourself with university regulations, policies and procedures, including grade appeals and academic misconduct, <http://uwinnipeg.ca/academics/calendar/docs/regulationsandpolicies.pdf>.

All students, faculty, and staff have the right to participate, learn, and work in an environment that is free of harassment and discrimination. The UW Respectful Working and Learning Environment Policy may be found online at [www.uwinnipeg.ca/respect](http://www.uwinnipeg.ca/respect).

Students with documented disabilities, temporary or chronic medical conditions, requiring academic accommodations for tests/exams or during lectures/laboratories are encouraged to contact Accessibility Services (AS) at 204.786.9771 or <https://www.uwinnipeg.ca/accessibility-services/> to discuss appropriate options. All information about a student's disability or medical condition remains confidential.

Students may choose not to attend classes or write examinations on holy days of their religion, but they must notify their instructors at least two weeks in advance. Instructors will then provide an opportunity for students to make-up work and/or examinations without penalty. A list of religious holidays can be found in the 2021-2022 Academic Calendar, in the section, <https://www.uwinnipeg.ca/academics/calendar/dates.html>.
